MacFonts

QuickReference Guide

macXware

Intstallation

Insert the CD-ROM into your CD-ROM drive. A macXware Fonts CD icon will appear on your Desktop. Double-click the icon to open the welcome screen. Once open, you can click on the Font Manager icon to start the FontManager.

The FontManager is the easiest way for you to preview the available fonts from the MacFonts CD. You can preview the style and script of the font prior to installing the font on your system.

The user interface will show you two main list windows. The list on the right will show fonts that are currently installed on your system and the list on the left shows the fonts available on the CD-ROM.

To use a font from the CD, you have 2 options.

Option 1: Activate Temporarily
This option will let you use the selected font in any application without actually installing it on your system. The font will be available for use until you perform a System Restart.

Option 2: Install Permanently
This option will install the font onto your system so it's available to all applications at all times, even after a System Restart. The font will be installed in the \Library\Fonts directory. The only way to remove the installed font is to manually uninstall it.

For more information or for answers to commonly asked questions please visit www.macXware.com and click on *support*.
